

Frodsham Geology Walk 06/05/2024

Frodsham Festival of Walks 2024

Geology Walk 06/05/2024

No previous geological knowledge is required. The walk begins with a brief introduction to rock types in St Laurence graveyard before exploring the rock outcrops that make up the Site of Special Scientific Interest on Howey Lane. The geological features of Ladies Walk in Frodsham Hill Wood and the distant landscape features seen from the War Memorial are also included.

The walk is of medium difficulty on uneven surfaces, with some steep drops to the side.

We use some narrow earth paths which may be muddy and some hillside steps both up and down. No dogs please.

The route of the walk is shown on the accompanying map as a red dashed line, with the start and end at St Laurence Church and stop numbers shown in red.

The stops are:

1. Churchyard Introduction to geology
2. Local geology.
3. Fault.
4. The red rocks.
5. Glacial meltwater channel.
6. Quarrying.
7. Etching & carving.
8. Regional geology and landscape.
